Description

IPerTalk is a full-IP communication system capable of managing the telephone functions typical of a PABX by integrating them with new ways of communicating (video calls, e-mails, sms, CTI, management). IPerTalk is an extremely modular software platform, expandable both in terms of resources and multimedia functions, allowing the management of different operating tools in a single service center. IPerTalk is the ideal solution for those who want to use different communication resources, integrating them. The bundle code 1375/10 is the solution designed for professional offices, points of sale, with offices and remote terminals, which require advanced and multimedia services such as the integration of the video door entry system with the telephone service. IP telephone system equipped with 1 license for traditional lines and 3 Urmet derivative licenses and can be extended up to a maximum of 4 lines and 12 derivatives, by means of additional licenses. The system is also equipped with the following features: customizable advanced automatic responder, voicemail for each user (with access to messages via email, web user interface and internal extension), web interface for each user (to customize your own extension and access the functions additional), private and shared address book, administration interface.
